REAL-TIME INSPECTION ANALYSIS
FAULT TYPES BY SUPPLIER

A Pareto chart can be generated on demand via the VCS customer portal. This analysis shows the current fault status across suppliers, for each open inspection request, including the suppliers contributing the largest number of faults. In this example documentation faults are the most common and 2 suppliers are responsible for nearly 100% of the faults.

Number of Faults

Cumulative % of total faults found

Supplier #1	Supplier #2	Supplier #3	Supplier #4
(Name of supplier company goes here)	(Name of supplier company goes here)	(Name of supplier company goes here)	(Name of supplier company goes here)

— Cumulative %

- Documentation Fault
- Electrical Fault
- Marking Fault
- Visual Inspection Fault
- Foreign Object Detection Fault
- Prohibited Materials Fault
